

## TRIBUNOL Readymix G11

Tribunol Readymix G11 is a high performance coolant ready-mix, which was specially adapted to our customer requirements.

### DESCRIPTION

Based on monoethylene glycol and free of nitrite, amine and phosphate, this application-optimised ready-to-use mix offers reliable frost protection down to -26 °C. It reliably protects modern combustion engines from damage caused by Cavitation, rust and overheating. Its highly active ingredient package protects the metals used in the cooling system from corrosion and deposits, while at the same time protecting all common seals, plastics and hose lines. Because it is produced with standardised demineralised water, Tribunol Readymix G11 is particularly recommended for rationalised stockpiling. It is ready for use and can be used directly without dilution to refill the empty cooling system. This product is miscible and compatible with antifreeze agents of the same specification. To ensure safe and trouble-free operation, we recommend not to mix this product with other products.

**Tribunol Readymix G11 is available in the mixing ratios 50:50 (-35°C) and 40:60 (-27°C).**

### BENEFITS

- long and excellent corrosion protection
- safe frost protection down to - 26°C
- universally applicable, if this product class is prescribed
- excellent elastomer compatibility
- low price

**Recommended and tested in units for which the following specifications and filling instructions are required:**

British Standard BS 6580:1992  
AFNOR R-15601

MB 325.0 , MB 325.2  
MAN 324 TYPE NF  
VW TL 774-C (G11)
