

TRIBUNOL Readymix G12+

Tribunol Readymix G12+ is a high performance ready-to-use coolant mixture that has been specially adapted to our customer requirements.

DESCRIPTION

Based on monoethylene glycol and free of nitrites, amines, silicates and phosphates, in combination with OAT technology, this application-optimized ready-mix offers reliable frost protection down to -26 °C. It reliably protects modern combustion engines from damage caused by cavitation, rust and overheating. Its highly active ingredient package protects the metals used in the cooling system from corrosion and deposits, while at the same time protecting all common seals, plastics and hose lines.

Because it is produced with standardised demineralised water, Tribunol Readymix G12+ is particularly recommended for rationalised stockpiling. It is ready for use and can be used directly without dilution to refill the empty cooling system. This product is miscible and compatible with antifreeze agents of the same specification. To ensure safe and trouble-free operation, we recommend not to mix this product with other products. Tribunol Readymix G12+ is available in the mixing ratios 50:50 (-35°C) as well as 40:60 (-27°C)

BENEFITS

- long and excellent corrosion protection
- safe frost protection down to - 26°C
- universally applicable, if a silicate free product is prescribed
- excellently suitable for engines, cylinder heads and radiators made of aluminium

Recommended and tested in units for which the following specifications and filling instructions are required:

MB 325.3
MAN 324 TYPE SNF
GM 6277M
VW TL 774-F (G12+)
