

## TRIBUNOL Readymix G12++

Tribunol Readymix G12++ is a high performance coolant ready-mix that has been specially adapted to our customer requirements.

### DESCRIPTION

Based on monoethylene glycol and free of nitrites, amines and phosphates, this application-optimised ready-mix offers reliable frost protection. It reliably protects modern combustion engines from damage caused by Cavitation, rust and overheating. As a product based on organic inhibitors, its highly active active ingredient package protects the metals used in the cooling system from corrosion and Deposits. At the same time it protects all common seals, plastics and hose lines.

Due to the production with standardised demineralised water, Tribunol Readymix G12++ is particularly recommended for rationalised stockpiling. It is ready for use and can be directly can be used without dilution to refill the empty cooling system. This product is miscible and compatible with antifreeze agents of the same specification. To ensure safe and to ensure trouble-free operation, we recommend not to mix the product with other products.

**Tribunol Readymix G12++ is available in the mixing ratios 50:50 (-35°C) and 40:60 (-27°C).**

### BENEFITS

- long and excellent corrosion protection
- safe frost protection
- universally applicable, if a silicate containing product is prescribed
- excellently suitable for engines, cylinder heads and radiators made of aluminium
- Rationalization product
- available in different mixing ratios

**Recommended and tested in units for which the following specifications and filling instructions are required:**

MB 325.5  
MAN 324 TYPE Si-OAT  
VW TL 774-G (G12++)
